

ABSTRACT OF THE INVENTION

The invention provides a system and method for multiple death life insurance in the event of simultaneous or coincident death of two or more insured parties, or a defined group of two or more insured parties. More particularly, embodiments of the invention provide a computer system and method for providing simultaneous multiple death life insurance designed to provide benefits to alleviate the financial burden experienced by beneficiaries as a result of simultaneous or coincident of two or more insured parties. Simultaneous multiple death life insurance according to the invention may be obtained through the internet by remote computers and internet access devices well known in the art.
